Security Highlights

-  All operations are read-only until execution.
-  Data is never modified during recovery.
-  Erasure methods follow NIST SP 800-88 Rev. 1.
-  Certificates are tamper-proof and verifiable.

 [Learn More About Security](#)

Wipe File/Folder

Securely erase specific files or folders using advanced wiping methods.

System Health
All Systems Operational

Select File/Folder

C:\Users\sammons17\Documents\Criminal Sc

Add File/Folder

Type of file:

Microsoft Word Document (.docx)

Opens with:

 Microsoft Word

Change...

Location:

C:\Users\sammons17\Documents\Criminal Sc

Size:

12.2 KB (12,587 bytes)

Size on disk:

16.0 KB (16,384 bytes)

Select Wiping Method

Choose one or more secure erasure methods to apply.

CSPRNG Random Overwrite

Replace sensitive files with unpredictable data.

Cryptographic Erasure

Make protected data permanently inaccessible.

File Slack / Cluster-Tip Sanitization

Clear hidden remnants around your files.

Filesystem Metadata Sanitization

Remove exposed traces left by the filesystem.

NIST SP 800-88 Policy Engine

Choose a policy-backed sanitization strategy.

Secure Free-Space Wiping

Clear recoverable traces from unused space.

Single-Pass Zero Overwrite

Clean selected files with a verified zero overwrite.

Storage-Aware Sanitization & Fallback

Automatically choose the safest available path.

Temporary / Cache Sanitization

Clear temporary files and residual traces.

Operation Log

```
[16:15:49] Wiping C:/Windows/System32/uwlrmf.xnk -- pattern 1dc0daf5.txc0
[16:15:49] Wiping C:/Users/aka/Downloads/wkctkywm.jpg -- pattern bcadaef7b1bc
[16:15:49] Wiping /ntfs/logs -- pattern 1bbb1001114
[16:15:50] Wiping /home/user/Documents/blurthw.docx -- pattern ead01001ffbc
[16:15:50] Wiping C:/Windows/System32/bjqapqw2jmy.txt -- pattern aae0bffa0c06
[16:15:50] Wiping C:/Users/aka/Documents/opensvcj.docx -- pattern 1b2fcb1aeedv
[16:15:50] Wiping C:/Program Files/aq/ntdt/own.dll -- pattern f6acbac010
[16:15:50] Wiping C:/Program Files/aqndt/png -- pattern d31d95aad11d
```

WIPE SUCCESSFUL!

The selected file/folder has been securely wiped using the chosen method(s).

Destroy Drive

Permanently destroy data on entire storage devices using advanced destruction methods.

Device Requires Alternative Sanitization

This drive does not support any of the currently available software-based erasure methods.

Device Overview

Samsung / Seagate / Generic Drive

Unsupported for Software-Based Erasure

Device Type

HDD / SSD / USB / Optical Media

Capacity

1 TB

Serial Number

XCOXXXXXX

Supported Erasure Methods

None Detected

Current Recommendation

Alternative Destruction /
Certified Disposal

Important Notice

Wiping physical destruction should be performed only through authorized procedures or certified destruction services.

Do not attempt unsafe destruction yourself.

Why is Alternative Sanitization Required?

Some devices do not expose commands required for secure erasure due to hardware, firmware, or interface limitations. In such cases, software-based wiping cannot guarantee permanent data elimination.

Help Center

Everything you need to securely erase, recover, and manage your storage.

 **Getting Started**

 Wiping Data

 Recovery

 Drive Destruction

 Certificates

 Troubleshooting

 Safety

 **Getting Started**
Understand what DREX is and follow best practices before performing any operation.

 **What is DREX?**

DREX is a secure data management platform designed to permanently erase data, recover deleted files, and provide verifiable proof of sanitization.

 **Before You Begin**

- Connect the storage device securely.
- Close applications using the target drive.
- Verify the selected drive before starting any operation.
- Back up anything you may need later.

 **Important**

Data sanitization and drive destruction can be permanent and irreversible.

 **Best Practice**

Always verify your target drive and review operation details before confirming.

DREX Operations Overview

 **Wipe Drive**

Permanently sanitize an entire storage device using a secure method.

[Learn More →](#)

 **Wipe File / Folder**

Securely remove specific files or folders without wiping the entire drive.

[Learn More →](#)

 **Recover Data**

Search and recover deleted or lost files that may still be recoverable.

[Learn More →](#)

 **Destroy Drive**

Permanently destroy a storage device to take it out of service.

[Learn More →](#)

 **Certificates**

View and manage certificates as proof of completed operations.

[Learn More →](#)

 **Troubleshooting**
Find solutions to common issues.

 **Drive not detected**
Check connections, permissions and system visibility. [→](#)

 **Wipe operation failed**
Review drive status, permissions and operation logs. [→](#)

 **Recovery finds no files**
Data may be overwritten or securely erased. [→](#)

 **Certificate is unavailable**
Ensure operation completed successfully. [→](#)

[View All Solutions →](#)

 **Safety & Best Practices**
Follow these guidelines to ensure safe operations.

 **Before Wiping**
Verify → Backup → Select → Confirm

 **Before Recovery**
Stop using the drive → Scan → Recover to another location

 **Before Destruction**
Verify device → Confirm data status → Destroy

DREX operations may permanently change or remove data. Always verify your target before proceeding.

 **Need More Help?**
Get additional support and resources.

 **Troubleshooting**
Find solutions to common problems.

 **Operation Logs**
Review what happened during an operation.

 **System Status**
Check whether DREX services are operating normally.

 **Contact Support**
Get assistance with an issue that cannot be resolved through Help.
